

## Features

## 1. High density mounting capability

A space saving design that keeps the connector compact, but still maintains an adequate vacuum area (no less than 0.7 mm wide). Depth DS: 2.3 mm DP: 1.78 mm

## 2. Reliable contact performance

Even though the mated height is low, the BM20 still leads it class in maximum effective mating lengths for each mating height.
<Effective Mating Length>
Height $0.8 \mathrm{~mm}: 0.2 \mathrm{~mm}$
Height $0.6 \mathrm{~mm}: 0.15 \mathrm{~mm}$
The addition of the two point contact system adds more reliability to the contacts.
3. No restrictions to PCB pattern design for the 0.8 mm height connector*1
This series utilizes a thin wall to insulate the bottom surface of the connector and maintains an effective mating length of 0.2 mm . This removes any restriction for PCB pattern layout design under the connector.
Note *1: There are some restrictions for the 0.6 mm height style.

## 4. Enhanced mating operations

The structure uses guide ribs to ease the mating process and offers a self alignment range of up to 0.3 mm . A clear tactile click is used as an indicator to the user that the mating process was completed.

## 5. Drop and shock resistant structure

Dimples were designed into the contacts to increase their retention force and to absorb the shock delivered from a drop or other impact.

## 6. Debris resisting design

When mated, the connector's design covers the contacts which help to keep dust and other debris away from the contacts. The SMT leads are kept very close to the connector housing which also helps to prevent shorts caused by debris on the exposed contacts

|  | Rated Voltage | AC, DC 30V | Operating Humidity Range |  | 80\% | Storage Humidity Range | $\begin{aligned} & 40 \sim 70 \% \\ & \text { (Note 2) } \\ & \hline \end{aligned}$ |
| Items |  | Specifications |  |  | Conditions |  |  |
| 1. Insulation | esistance | Minimum of $50 \mathrm{M} \Omega$ |  |  | Measured with DC 100 V |  |  |
| 2. Withstandi | V Voltage | No flashover or breakdown |  |  | Apply AC 100 V for 1 minute |  |  |
| 3. Contact R | istance | Maximum of $100 \mathrm{~m} \Omega$ |  |  | Measured with AC $20 \mathrm{mV}, 1 \mathrm{kHz}$ and 1 mA |  |  |
| 4. Vibration Resistance |  | No electrical discontinuity of $1 \mu$ s or greater |  |  | Frequency $10-55 \mathrm{~Hz}$, half amplitude $0.75 \mathrm{~mm}, 3$ directions for 2 hours |  |  |
| 5. Humidity Resistance |  | Contact resistance Maximum of $100 \mathrm{~m} \Omega$ Insulation resistance Minimum of $25 \mathrm{~m} \Omega$ |  |  | Left at temperature $40 \pm 2^{\circ} \mathrm{C}$, humidity 90 to $95 \%$, 96 hours |  |  |
| 6. Temperature Cycles |  | Contact resistance Maximum of $100 \mathrm{~m} \Omega$ Insulation resistance Minimum of $50 \mathrm{~m} \Omega$ |  |  | $\left(-55^{\circ} \mathrm{C}\right.$ : 30 minutes $\rightarrow 5 \sim 35^{\circ} \mathrm{C}$ : 10 minutes $\rightarrow 85^{\circ} \mathrm{C}: 30$ minutes $\rightarrow 5 \sim 35^{\circ} \mathrm{C}$ : 10 minutes) 5 cycles |  |  |
| 7. Durability |  | Contact Resistance: maximum of $100 \mathrm{~m} \Omega$ |  |  | 10 mating cycles |  |  |
| 8. Soldering Heat Resistance |  | Should be no melting of resin parts that affects its performance |  |  | Reflow: according to the Recommended Solder Profile Hand solder: Soldering iron temperature $350^{\circ} \mathrm{C}$, no more than 3 seconds. |  |  |

Note 1: Includes temperature rise caused by current flow.
Note 2: The term "storage" here refers to products stored for a long period prior to board mounting and use. The operating temperature and humidity range covers the non-energized condition of connectors after board mounting and the temporary storage conditions during transportation, etc.

## Materials

| Product | Component | Materials | Finish | UL Regulation |
| :---: | :---: | :---: | :---: | :---: |
| Receptacle | Insulator | LCP | Black | UL94V-0 |
| Header | Contact | Phosphorous bronze | Gold plating | - |

## -Product Number Structure

Refer to this page when determining product specifications by model types. Please place orders with part numbers listed in this catalog. The characteristics and specifications of the product described in this catalog are reference values. Please make sure to check the latest delivery specifications at the time of product use.

## Operating Precautions

| 1. Recommended Solder Profile |  <br> [Applicable Conditions] <br> 1. Peak temperature: $250^{\circ} \mathrm{C}$ peak <br> 2. Heating parts: $220^{\circ} \mathrm{C}$ or above, within 60 seconds <br> 3. Preheating parts: 150 to $180^{\circ} \mathrm{C}, 90$ to 120 seconds <br> 4. Number of times: Maximum of 2 reflow cycles <br> (Note 1)The temperatures mentioned above refer to the PCB surface temperature near the connector leads. <br> (Note 2)When using nitrogen reflow please implement 1,000 [ppm] or higher oxygen density. <br> Please contact the sales representative of our company in case of less than 1,000 [ppm]. |
| :---: | :---: |
| 2. Recommended hand solder conditions | The temperature of the soldering iron should fall within the range of $340 \pm 10^{\circ} \mathrm{C}$ and should not make contact for longer than 3 seconds |
| 3. Recommended screen thickness: Opening ratio (pattern area ratio) | Thickness: 0.1 mm Opening ratio: DS side $70 \%$ DP side $80 \%(\mathrm{H}=0.8 \mathrm{~mm})$ DP side $70 \%(\mathrm{H}=0.6 \mathrm{~mm})$ |
| 4. Leaning of PCB | Maximum of 0.02 mm at the center of connector (using both edges of connector as criteria) |
| 5. Washing | Cleaning is not recommended for this connector. Cleaning agents can deteriorate the mechanical operation and the environmental resistance of this connector. |
| 6. Precautions | -Do not mate or unmate these connectors until they are mounted, failure to follow this precaution can lead to deformation or damage to these connectors. <br> -Provide another form of support to the PCB, this connector was not designed to be the main form of support. <br> ■Using excessive force to mate or unmate this connector can damage the contacts. <br> ■Do not apply excessive amounts of flux as it may cause the solder and flux to wick. <br> ■There may be a slight variance in the color of the molding between production lots, this variance will not affect the performance of the connector. <br> -Refer to the next page for the handling precautions when mating and unmating the connectors. <br> If the connector becomes disconnected due to impact, a fall or a counterforce to the FPC, it may be necessary to hold the connector in place with an addition to the device's case or other cushioning material to hold the connector in place. |

## -Handling precautions when mating

|  |  |
| :---: | :---: |
|  | Prior to mating, locate the guidance ribs and align the header. Do not apply excessive force during the mating process as it may damage the contacts. |
|  | Make sure that the connector is parallel to the other side, then press it down until it is fully mated while maintaining the angle. |

## -Handling precautions for unmating

Io
To unmate this connector, lift evenly across the header.
Make sure that each side of the connector stays parallel
to the other.
