SN74LVC2T45

SCES516K - DECEMBER 2003-REVISED JUNE 2017

# SN74LVC2T45 Dual-Bit Dual-Supply Bus Transceiver With Configurable Voltage Translation

#### 1 Features

- Fully Configurable Dual-Rail Design Allows Each Port to Operate Over the Full 1.65-V to 5.5-V Power-Supply Range
- V<sub>CC</sub> Isolation Feature If Either V<sub>CC</sub> Input Is at GND, Both Ports Are in the High-Impedance State
- DIR Input Circuit Referenced to V<sub>CCA</sub>
- Low Power Consumption, 4-μA Max I<sub>CC</sub>
- Available in the Texas Instruments NanoFree<sup>™</sup> Package
- ±24-mA Output Drive at 3.3 V
- I<sub>off</sub> Supports Partial-Power-Down Mode Operation
- · Max Data Rates
  - 420 Mbps (3.3-V to 5-V Translation)
  - 210 Mbps (Translate to 3.3 V)
  - 140 Mbps (Translate to 2.5 V)
  - 75 Mbps (Translate to 1.8 V)
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Protection Exceeds JESD 22
  - 4000-V Human-Body Model (A114-A)
  - 200-V Machine Model (A115-A)
  - 1000-V Charged-Device Model (C101)

#### 2 Applications

- Personal Electronic
- Industrial
- Enterprise
- Telecom

#### 3 Description

This dual-bit noninverting bus transceiver uses two separate configurable power-supply rails. The A port is designed to track  $V_{CCA}$ .  $V_{CCA}$  accepts any supply voltage from 1.65 V to 5.5 V. The B port is designed to track  $V_{CCB}$ .  $V_{CCB}$  accepts any supply voltage from 1.65 V to 5.5 V. This allows for universal low-voltage bidirectional translation between any of the 1.8-V, 2.5-V, 3.3-V, and 5-V voltage nodes.

The SN74LVC2T45 is designed for asynchronous communication between two data buses. The logic levels of the direction-control (DIR) input activate either the B-port outputs or the A-port outputs. The device transmits data from the A bus to the B bus when the B-port outputs are activated, and from the B bus to the A bus when the A-port outputs are activated. The input circuitry on both A and B ports always is active and must have a logic HIGH or LOW level applied to prevent excess  $I_{\rm CC}$  and  $I_{\rm CCZ}$ .

The SN74LVC2T45 is designed so that the DIR input circuit is supplied by  $V_{\text{CCA}}$ . This device is fully specified for partial-power-down applications using  $I_{\text{off}}$ . The  $I_{\text{off}}$  circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

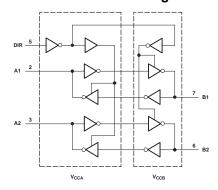

The  $V_{CC}$  isolation feature ensures that if either  $V_{CC}$  input is at GND, both ports are in the high-impedance state. NanoFree<sup>TM</sup> package technology is a major breakthrough in IC packaging concepts, using the die as the package.

#### Device Information<sup>(1)</sup>

| PART NUMBER    | PACKAGE   | BODY SIZE (NOM)   |
|----------------|-----------|-------------------|
| SN74LVC2T45DCT | SM8 (8)   | 2.95 mm x 2.80 mm |
| SN74LVC2T45DCU | VSSOP (8) | 2.30 mm x 2.00 mm |
| SN74LVC2T45YZP | DSBGA (8) | 1.89 mm x 0.89 mm |

(1) For all available packages, see the orderable addendum at the end of the datasheet.

<sup>(1)</sup> Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

#### 6.2 ESD Ratings

|                    |                         |   | VALUE | UNIT |
|--------------------|-------------------------|---|-------|------|
|                    |                         | Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 (1)              | ±4000 |      |
| V <sub>(ESD)</sub> | Electrostatic discharge | Charged-device model (CDM), per JEDEC specification JESD22-C101 (2) | ±1000 | V    |
|                    |                         | Machine model (A115-A)  | ±200  |      |

<sup>(1)</sup> JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

#### 6.3 Recommended Operating Conditions

<sup>(2)</sup> The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

<sup>(3)</sup> The value of  $V_{CC}$  is provided in the recommended operating conditions table.

<sup>(2)</sup> JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

<sup>(1)</sup>  $V_{CCI}$  is the  $V_{CC}$  associated with the input port.

<sup>(2)</sup>  $V_{CCO}$  is the  $V_{CC}$  associated with the output port.

<sup>(3)</sup> All unused data inputs of the device must be held at V<sub>CCI</sub> or GND to ensure proper device operation. See *Implications of Slow or Floating CMOS Inputs*, SCBA004.

<sup>(4)</sup> For  $V_{CCI}$  values not specified in the data sheet,  $V_{IH}$  min =  $V_{CCI} \times 0.7$  V,  $V_{IL}$  max =  $V_{CCI} \times 0.3$  V.

Output Control

- NOTES: A. C<sub>L</sub> includes probe and jig capacitance.
  - B. Waveform 1 is for an output with internal conditions such that the output is low, except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
  - C. All input pulses are supplied by generators having the following characteristics: PRR  $\leq$  10 MHz,  $Z_0 = 50 \Omega$ ,  $dv/dt \geq 1 V/ns$ .
  - D. The outputs are measured one at a time, with one transition per measurement.
  - E.  $t_{PLZ}$  and  $t_{PHZ}$  are the same as  $t_{dis}$ .
  - F.  $t_{PZL}$  and  $t_{PZH}$  are the same as  $t_{en}$ .
  - G.  $t_{PLH}$  and  $t_{PHL}$  are the same as  $t_{pd}$ .
  - H.  $V_{CCI}$  is the  $V_{CC}$  associated with the input port.
  - I.  $V_{CCO}$  is the  $V_{CC}$  associated with the output port.
  - J. All parameters and waveforms are not applicable to all devices.

#### 8 Detailed Description

#### 8.1 Overview

The SN74LVC2T45 is dual-bit, dual-supply noninverting voltage level translation. Pin Ax and direction control pin are support by  $V_{CCA}$  and pin Bx are support by  $V_{CCB}$ . The A port is able to accept I/O voltages ranging from 1.65 V to 5.5 V, while the B port can accept I/O voltages from 1.65 V to 5.5 V. The high on DIR allows data transmission from A to B and a low on DIR allows data transmission from B to A.

#### 8.2 Functional Block Diagram

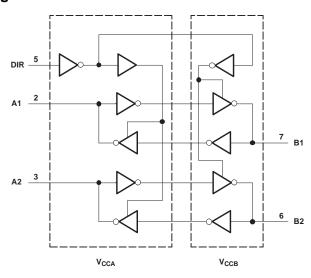

Figure 18. Logic Diagram (Positive Logic)

#### 8.3 Feature Description

# 8.3.1 Fully Configurable Dual-Rail Design Allows Each Port to Operate Over the Full 1.65-V to 5.5-V Power-Supply Range

Both  $V_{CCA}$  and  $V_{CCB}$  can be supplied at any voltage between 1.65 V and 5.5 V making the device suitable for translating between any of the voltage nodes (1.8-V, 2.5-V, 3.3-V and 5-V).

#### 8.3.2 Support High-Speed Translation

SN74LVC2T45 can support high data rate application. The translated signal data rate can be up to 420 Mbps when signal is translated from 3.3 V to 5 V.

#### 8.3.3 I<sub>off</sub> Supports Partial-Power-Down Mode Operation

I<sub>off</sub> will prevent backflow current by disabling I/O output circuits when device is in partial-power-down mode.

#### 8.4 Device Functional Modes

Table 1 lists the functional modes of the SN74LVC2T45 device.

Table 1. Function Table (1) (Each Transceiver)

| INPUT<br>DIR | OPERATION       |
|--------------|-----------------|
| L            | B data to A bus |
| Н            | A data to B bus |

(1) Input circuits of the data I/Os always are active.

#### 9 Application and Implementation

#### **NOTE**

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

#### 9.1 Application Information

The SN74LVC2T45 device can be used in level-translation applications for interfacing devices or systems operating at different interface voltages with one another. The maximum data rate can be up to 420 Mbps when device translate signal from 3.3 V to 5 V.

#### 9.2 Typical Applications

#### 9.2.1 Unidirectional Logic Level-Shifting Application

Figure 19 shows an example of the SN74LVC2T45 being used in a unidirectional logic level-shifting application.

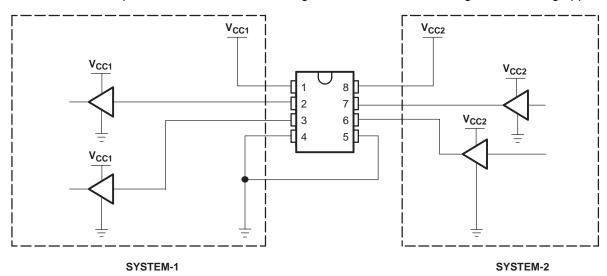

Figure 19. Unidirectional Logic Level-Shifting Application

#### 9.2.1.1 Design Requirements

Table 2 lists the pins and pin descriptions of the SN74LVC2T45 connections with SYSTEM-1 and SYSTEM-2.

Table 2. SN74LVC2T45 Pin Connections With SYSTEM-1 and SYSTEM-2

| PIN | NAME             | FUNCTION         | DESCRIPTION  |
|-----|------------------|------------------|--|
| 1   | V <sub>CCA</sub> | V <sub>CC1</sub> | SYSTEM-1 supply voltage (1.65 V to 5.5 V)                  |
| 2   | A1               | OUT1             | Output level depends on V <sub>CC1</sub> voltage.          |
| 3   | A2               | OUT2             | Output level depends on V <sub>CC1</sub> voltage.          |
| 4   | GND              | GND              | Device GND   |
| 5   | DIR              | DIR              | GND (low level) determines B-port to A-port direction.     |
| 6   | B2               | IN2              | Input threshold value depends on V <sub>CC2</sub> voltage. |
| 7   | B1               | IN1              | Input threshold value depends on V <sub>CC2</sub> voltage. |
| 8   | V <sub>CCB</sub> | V <sub>CC2</sub> | SYSTEM-2 supply voltage (1.65 V to 5.5 V)                  |

For this design example, use the parameters listed in Table 3.

**Table 3. Design Parameters** 

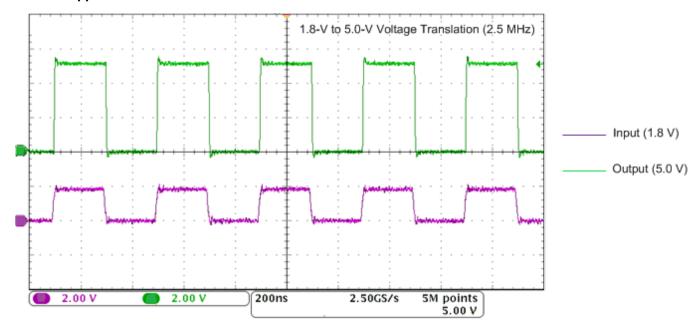

| DESIGN PARAMETER     | EXAMPLE VALUE   |
|----------------------|-----------------|
| Input voltage range  | 1.65 V to 5.5 V |
| Output voltage range | 1.65 V to 5.5 V |

#### 9.2.1.2 Detailed Design Procedure

To begin the design process, determine the following:

- · Input voltage range
  - Use the supply voltage of the device that is driving the SN74LVC2T45 device to determine the input voltage range. For a valid logic high the value must exceed the  $V_{IH}$  of the input port. For a valid logic low the value must be less than the  $V_{IL}$  of the input port.
- Output voltage range
  - Use the supply voltage of the device that the SN74LVC2T45 device is driving to determine the output voltage range.

#### 9.2.1.3 Application Curve

#### 9.2.2 Bidirectional Logic Level-Shifting Application

Figure 20 shows the SN74LVC2T45 being used in a bidirectional logic level-shifting application. Because the SN74LVC2T45 does not have an output-enable (OE) pin, the system designer should take precautions to avoid bus contention between SYSTEM-1 and SYSTEM-2 when changing directions.

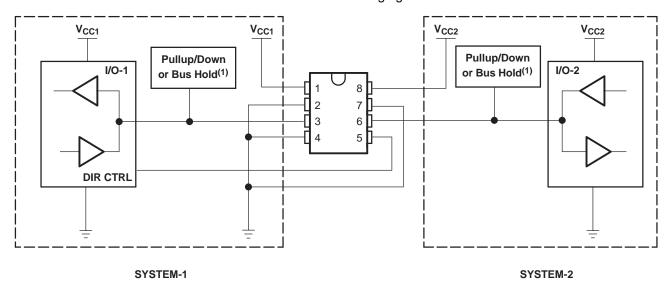

Figure 20. Bidirectional Logic Level-Shifting Application

#### 9.2.2.1 Design Requirements

Please refer to Unidirectional Logic Level-Shifting Application.

#### 9.2.2.2 Detailed Design Procedure

Table 4 shows data transmission from SYSTEM-1 to SYSTEM-2 and then from SYSTEM-2 to SYSTEM-1.

**DIR CTRL DESCRIPTION STATE** I/O-1 1/0-2 Out In SYSTEM-1 data to SYSTEM-2 SYSTEM-2 is getting ready to send data to SYSTEM-1. I/O-1 and I/O-2 are disabled. The bus-2 Hi-Z Hi-Z line state depends on pullup or pulldown. (1) DIR bit is flipped. I/O-1 and I/O-2 still are disabled. The bus-line state depends on pullup or pulldown. (1) 3 L Hi-Z Hi-Z In Out SYSTEM-2 data to SYSTEM-1

**Table 4. Data Transmission Sequence** 

(1) SYSTEM-1 and SYSTEM-2 must use the same conditions, that is, both pullup or both pulldown.

#### 9.2.2.2.1 Enable Times

Calculate the enable times for the SN74LVC2T45 using the following formulas:

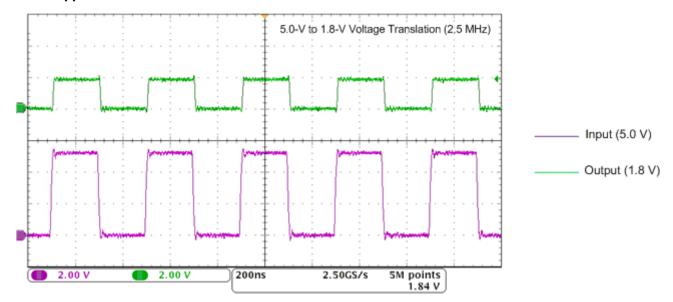

- $t_{PZH}$  (DIR to A) =  $t_{PLZ}$  (DIR to B) +  $t_{PLH}$  (B to A)
- $t_{PZL}$  (DIR to A) =  $t_{PHZ}$  (DIR to B) +  $t_{PHL}$  (B to A)
- $t_{PZH}$  (DIR to B) =  $t_{PLZ}$  (DIR to A) +  $t_{PLH}$  (A to B)
- $t_{PZL}$  (DIR to B) =  $t_{PHZ}$  (DIR to A) +  $t_{PHL}$  (A to B)

Submit Documentation Feedback

In a bidirectional application, these enable times provide the maximum delay from the time the DIR bit is switched until an output is expected. For example, if the SN74LVC2T45 initially is transmitting from A to B, then the DIR bit is switched; the B port of the device must be disabled before presenting it with an input. After the B port has been disabled, an input signal applied to it appears on the corresponding A port after the specified propagation delay.

#### 9.2.2.3 Application Curve

#### 10 Power Supply Recommendations

#### 10.1 Power-Up Considerations

A proper power-up sequence with inputs held at ground should be followed as listed:

- 1. Connect ground before any supply voltage is applied.
- 2. Power up V<sub>CCA</sub>.
- 3. V<sub>CCB</sub> can be ramped up along with or after V<sub>CCA</sub>.

The power supply can be any voltage between the minimum and maximum supply voltage rating located in the *Recommended Operating Conditions* table.

Each  $V_{CC}$  pin must have a good bypass capacitor to prevent power disturbance. For devices with a single supply, 0.1  $\mu$ F is recommended. If there are multiple  $V_{CC}$  pins, 0.01  $\mu$ F or 0.022  $\mu$ F is recommended for each power pin. It is acceptable to parallel multiple bypass caps to reject different frequencies of noise. A 0.1- $\mu$ F and 1- $\mu$ F are commonly used in parallel. The bypass capacitor must be installed as close to the power pin as possible for best results.

VCCA UNIT  $V_{CCB}$ 0 V 1.8 V 2.5 V 3.3 V 5 V 0 V 0 <1 <1 <1 <1 1.8 V <1 <2 <2 <2 2 2.5 V <1 <2 <2 <2 <2 μΑ 3.3 V <1 <2 <2 <2 <2 5 V 2 <2 <1 <2 <2

Table 5. Typical Total Static Power Consumption (I<sub>CCA</sub> + I<sub>CCB</sub>)

# 11 Layout

#### 11.1 Layout Guidelines

To ensure reliability of the device, following common printed-circuit board layout guidelines is recommended.

- Bypass capacitors should be used on power supplies.
- Short trace lengths should be used to avoid excessive loading.

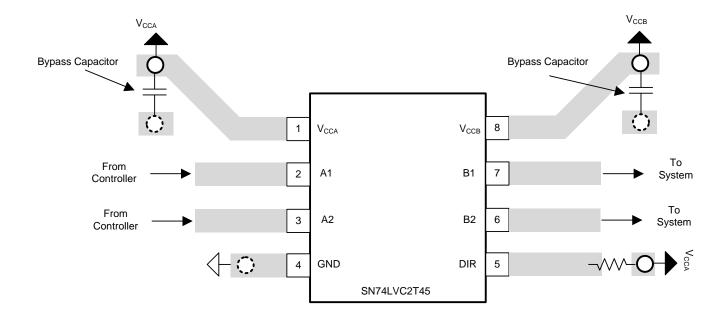

#### **Layout Guidelines (continued)**

• Placing pads on the signal paths for loading capacitors or pullup resistors to help adjust rise and fall times of signals depending on the system requirements

#### 11.2 Layout Example

#### 12 Device and Documentation Support

Implications of Slow or Floating CMOS Inputs, SCBA004.

Designing with SN74LVCXT245 and SN74LVCHXT245 Family of Direction controlled voltage translators, SLVA746

#### 12.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on *Alert me* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

#### 12.3 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

TI E2E™ Online Community TI's Engineer-to-Engineer (E2E) Community. Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

**Design Support** *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

#### 12.4 Trademarks

NanoFree, E2E are trademarks of Texas Instruments. All other trademarks are the property of their respective owners.

#### 12.5 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

#### 12.6 Glossary

SLYZ022 — TI Glossary.

This glossary lists and explains terms, acronyms, and definitions.

#### 13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

<sup>&</sup>lt;sup>(1)</sup> The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including to not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in sufference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption. **Green:** TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000pp flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a lie of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/files if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis of TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer of
